Experiment/ Case Study No.: 2

1. Experiment Title: Use var, let, const, and demonstrate basic features like template literals and destructuring; build a billing calculator with user input.

2. Software/Tools Required:

- Visual Studio Code (VS Code) / Notepad++
- Google Chrome / Mozilla Firefox
- JavaScript (ES6)
- HTML5
- Windows/Linux Operating System

3. Experiment Program Code:

1. practical2.html:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">

7. Output:

[Movie Ticket Booking System]

8. Result/Conclusion:

The **Movie Ticket Booking and Billing System** provides a simple and efficient way to automate the ticket booking and billing process. It eliminates manual calculations by generating accurate bills with GST and discount calculations. The project offers a modern and user-friendly interface with additional features such as dark mode, print ticket, reset form, and customer rating. It successfully demonstrates the practical implementation of modern JavaScript concepts including var, let, const, **template literals**, **object destructuring**, event handling, and DOM manipulation. This project improves the user experience and serves as a good example of developing interactive web applications using HTML, CSS, and JavaScript.
